How to Install Vamp Plug-ins for Audacity

These instructions are for Win7 and WinXp

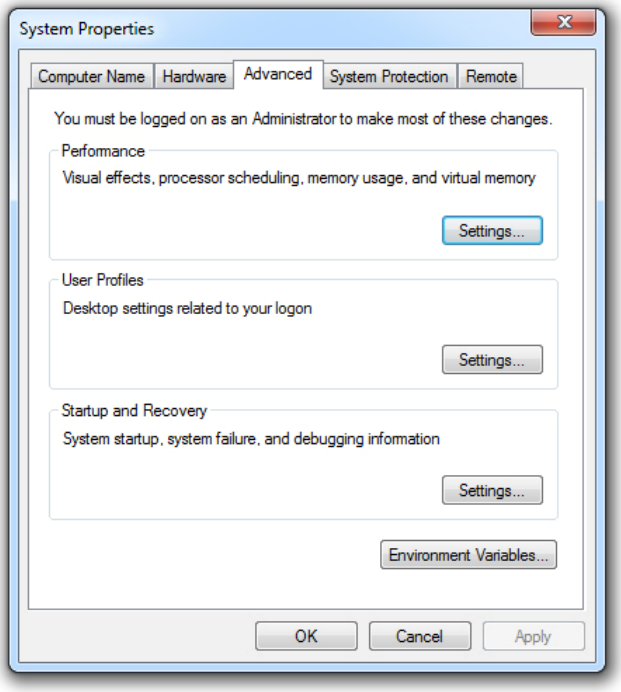

Audacity before changing the PATH variable.

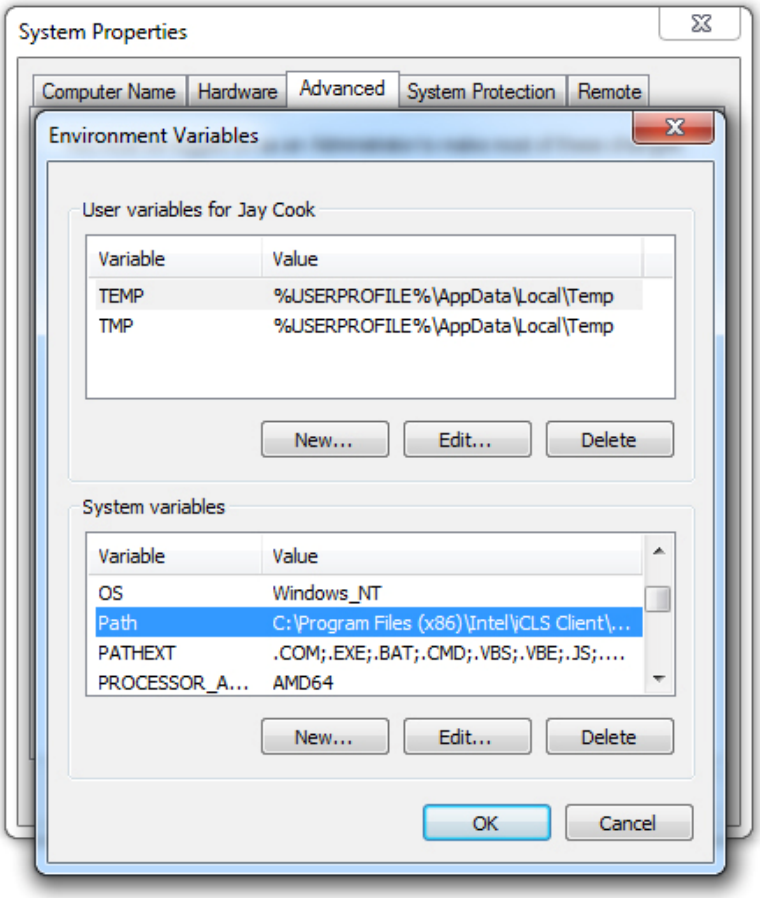

1. Copy the plug-ins to the directory where you want them stored. I placed mine in C:\Program Files (x86)\Vamp Plugins. I could not get mine to work in the C:\Program Files (x86)\Audacity\Plug-Ins folder.
2. Now you need to edit a system variable so Windows knows where they are located.
3. Click Windows Start Button
4. Right Click on COMPUTER and choose PROPERTIES. The following window will appear. Click on Advanced system settings. For WinXp goto Step 5.

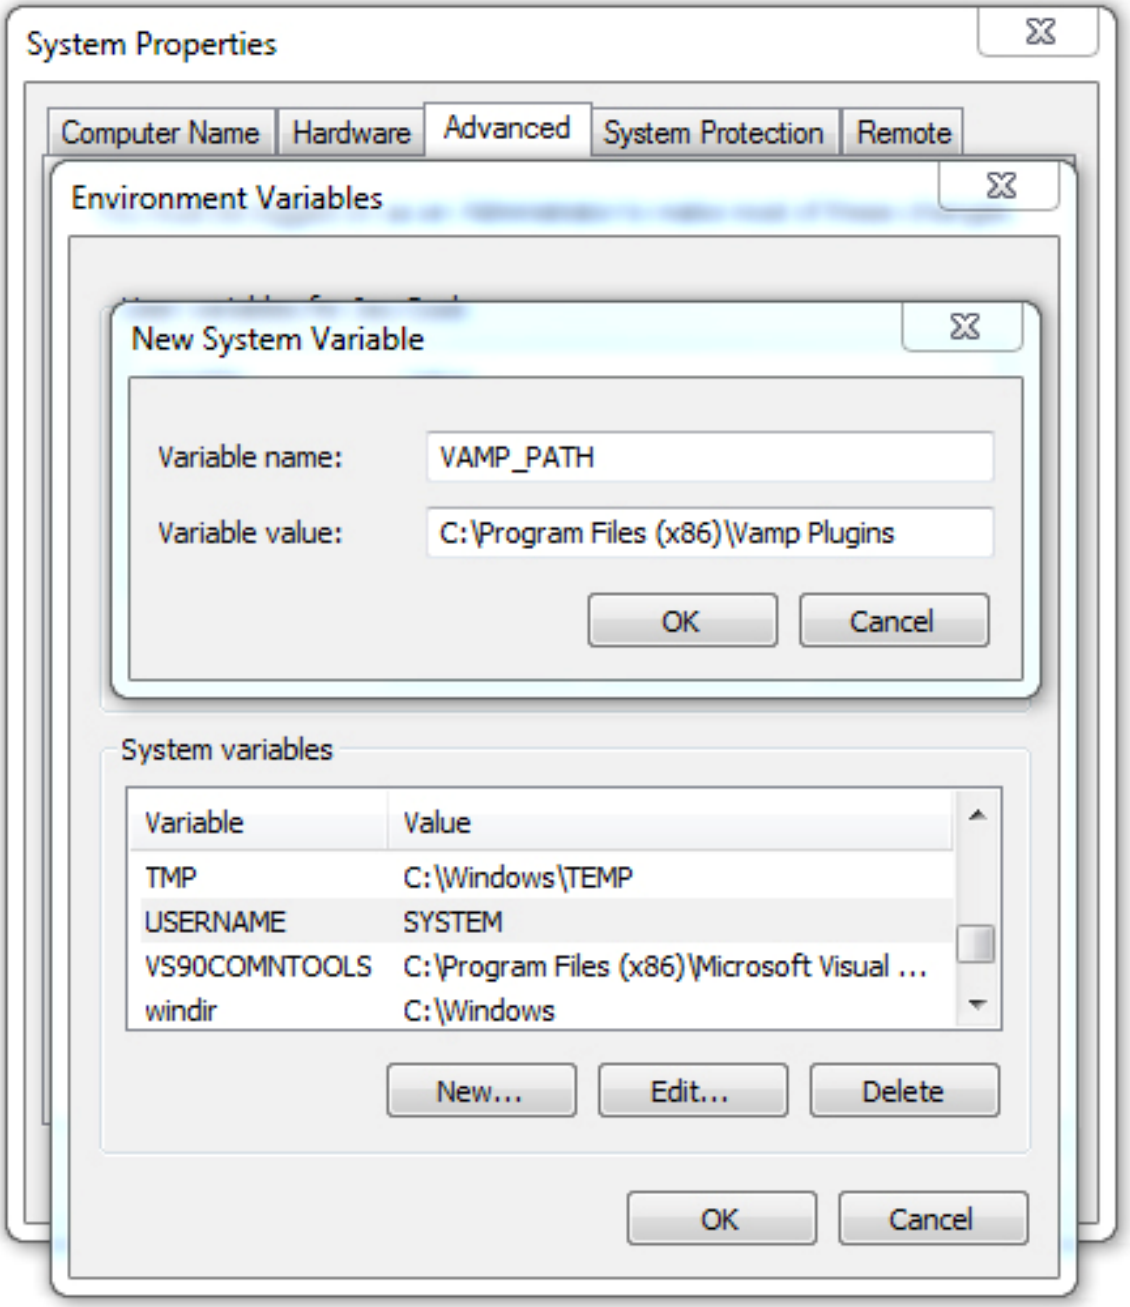

5. Click on “Environmental Variables”

6. Under System Variables, Click New.

7. For variable name enter VAMP_PATH. For the variable value enter the path to your plugin folder. Example: C:\Program Files (x86)\Vamp Plugins.

8. Click OK to exit and save. You will have to click OK 3 times.

9. Now restart Audacity. You may have to restart Windows first. Your Plugins should now be visible.
